

NEWS FOR IMMEDIATE RELEASE

OceanServer to Display Latest AUV Products at UDT Europe 2011

Fall River, MA - June 3, 2011 - OceanServer Technology, Inc. will be launching several new technologies at the Undersea Defense Technology conference held at the London ExCel Centre June 7th-9th. OceanServer has recently introduced an integrated Marine Sonic HDS Sidescan Sonar in the 600/1200 (kHz) range, which will be supported on most EP35 and EP42 AUV models. This new Sonar option will come standard with OceanServer's Sonar Mosaic software for rapid analysis and display in VectorMap (the Iver2 mission planner). OceanServer will also be displaying the "Iver Track" command and control software, based on Iridium Short Burst Data messaging. "Iver Track", supported on the full range of Iver AUVs, takes advantage of cloud computing to enable global users to monitor vehicle progress, access real-time vehicle data, issue limited commands to the Iver AUV in real-time, and log vehicle history. For additional information visit OceanServer during UDT at Stand C21.

The Iver Platform

All Iver2 AUV models come standard with OceanServer's VectorMap Mission Planning and Data Presentation tool, which provides geo-registered data files that can be easily exported to other software analysis tools. This unique AUV design has enabled OceanServer to carve out a very strong position in the research space for Autonomous Underwater Vehicles, sensors and behavioral studies. The VectorMap program can input NOAA ENC's or any geo-referenced charts, maps or photo images, allowing the operator to intuitively develop AUV missions using simple point-and-click navigation.

The base vehicle, with a starting price at just over \$50,000 USD, gives university, government and commercial users an affordable base-platform for sensor development or survey applications in water quality, sub-surface security and general research.

About OceanServer

OceanServer provides OEMs with innovative power solutions, sensors and robotics for a variety of applications. OceanServer's products are designed to be cost effective and easy to integrate into customer equipment. Fully engineered and well-documented subsystems can dramatically reduce time-to-market and enable new and innovative solutions for real-world application challenges. OceanServer Technology is headquartered in Fall River, Massachusetts.

For Additional Information on Iver2 AUV products in Canada; Iver2 sales in Canada facilitated through Roper Resources Ltd. contact Chris Roper 250 361 9115. Chris@RoperResources.com
